Re: Engineering Intern Opportunity

SEA Gas owns and operates the gas transmission system transporting natural gas from the Otway and Bass Basins to customers in SA and Victoria. The system includes 800km of high pressure pipeline, compressor stations, pressure reduction and metering stations and multiple main line valves, that transport approximately 50% of Adelaide's natural gas needs.

We are looking to offer 2 Vacation Engineering roles to students who will have successfully completed their 3rd year in Chemical or Mechanical Engineering, by end 2019, to undertake a diverse set of projects in our Operations and Asset Management functions.

The role is based in our Adelaide office, but will require some travel into the field both in country SA and Victoria. A full drivers licence is a mandatory requirement.

The role would commence 25 November 2019 and conclude 28 February 2020.

Applications should include an up-to-date resume which reflects your academic performance.

Please apply on the below email address:

applications@seagas.com.au

Applications close 31 August 2019.

Eric Bardy

Head of Operations
